

Events Unit Test

Performer: Maryam Majidi

Equivalence Classes:

- #1: Club admin wants to create an event.
- #2: Club member wants to express interest in attending new event.

Equivalence Case	New Event Data	Warnings/Errors?
1	Sample - { Name: "Flutter Friday" Description: "Meet your fellow butterflies for the first time at SunnySide Park!" Date: "12-07-18 at 5pm" Expense: "150.00" }	None- Event is created and displayed on the screen after submission. New event data is sent via POST request to backend.
2	User clicks on star on Event Card to indicate interest in attending.	None - A POST request recording the club member's choice is sent to the backend. The star is highlighted and remains that way until user "unattends" (which also send POST request with new user's decision).
